

AVNI GOLD SEEDS PVT. LTD.

Better seed.. for bright future...

MAHALAXMI (Re. Soyabean)

- Plant height is 2.5 to 2.75 feet.
- 60% pods 3 to 4 seeds.
- 90 to 100 days duration.
- Sustain water logged conditions & plant stand well even if it get over matured.
- Non Shattering, Branched plant thus profuse pod formation Highest Yelder of the industry.
- Resistant for Yellow vein mosaic, Charcoal Rot and Septoria brown spot.
- Easy for harvesting with the combine harvester.

SHAMBHO (Re. Soyabean)

- Plant height is 2.5 to 2.75 feet.
- 60% pods 3 to 4 seeds.
- 100 to 105 days duration.
- sustain water logged conditions & plant stand well even if it get over matured.
- Non Shattering, Branched plant thus profuse pod formation Highest Yelder of the industry.
- Resistant for Yellow vein mosaic, Charcoal Rot and Septoria brown spot.
- Easy for harvesting with the combine harvester.

CHITRANSH (Re. Soyabean)

- Plant height is 2.5 to 2.75 feet.
- 60% pods 3 to 4 seeds.
- 90 to 100 days duration.
- sustain water logged conditions & plant stand well even if it get over matured.
- Non Shattering, Branched plant thus profuse pod formation Highest Yelder of the industry.
- Resistant for Yellow vein mosaic, Charcoal Rot and Septoria brown spot.
- Easy for harvesting with the combine harvester.

SUREKHA (Re. Soyabean)

- Plant height is 2.5 to 2.75 feet.
- 60% pods 3 to 4 seeds.
- 100 to 105 days duration.
- sustain water logged conditions & plant stand well even if it get over matured.
- Non Shattering, Branched plant thus profuse pod formation Highest Yelder of the industry.
- Resistant for Yellow vein mosaic, Charcoal Rot and Septoria brown spot.
- Easy for harvesting with the combine harvester.

AMH-7879 (Hybrid Maize)

- Tall, Non lodging and Wide Adaptability
- Matures in 110-115 days (Rainy Season)
- 120-130 days Central & South India &
- 145-155 days North India (Winter)
- Uniform ears with excellent tip filling
- Tolerant to foliar diseases
- High yield potential with Stay Green

AMH-7181 (Hybrid Maize)

- Non lodging with erect plant type
- Good response to high management
- Matures in 105-110 days (Rainy)
- 115-125 days Central & South India &
- 145-155 days North India (Winter)
- Light orange semi flint kernels
- High yield potential under irrigated conditions

AMH-7700 (Hybrid Maize)

- Tall and Non lodging
- Drought tolerant
- Matures in 108-118 days (Rainy)
- 120-130 days Central & South India &
- 150-160 days North India (Winter)
- Uniform ears with good photosynthetic efficiency
- Yellow flint / semi flint kernels

AMH-2535 (Hybrid Maize)

- Tall and Non lodging
- Drought tolerant
- Matures in 108-118 days (Rainy)
- 120-130 days Central & South India &
- 150-160 days North India (Winter)
- Uniform ears with good photosynthetic efficiency
- Yellow flint / semi flint kernels

ABH-9191 (Hybrid Bajra)

- Medium maturing hybrid
- Medium tall
- Medium long, conical compact panicle
- Grey brown, obovate & bold seeds
- Matures in 75-80 Days.

AJH-VIJETA (Hybrid Jowar)

- Medium maturing hybrid (105-110 days)
- Medium tall plant with dark green leaves
- Long semi-compact symmetrical panicle
- Bold, circular and smooth grains
- Widely adapted and suitable for all sorghum growing areas

A V N I - 5 0 1 (Hybrid Jowar)

- Medium maturing hybrid (105-110 days)
- Medium tall plant with dark green leaves
- Long semi-compact symmetrical panicle
- Bold, circular and smooth grains
- Widely adapted and suitable for all sorghum growing areas

SAGAR-11 (Re. Bengalgram)

- Medium maturing variety (100-110 days)
- Spreading plant type
- Suitable for all soil type
- Suitable for rainfed and irrigated condition
- High yielding and Tolerant to fusarium wilt
